AZTEC CBD Starter Kit User Manual

Congratulations on purchasing your Starter Kit

Please read instructions and precautions before using the CCELL Power Supply.

Filling instructions

01.Insert a blunt tipped needle into the space between the airway + the outer wall of the cartridge and fill with 1ml of oil.

- Cartridge must be upright when filling the reservoir with oil
- Recommended Fill Temperature Between 90° - 130° F
- Do not fill into the middle post, or severe leaks will occur
- Do not overfill or allow oil to enter center way
- Fill up to the top of the glass

2. Immediately after filling, insert + press the mouthpiece until fully sealed. Mechanical assistance, such as an arbor press or channel lock pliers are required to fully seal the mouthpiece.

- Do not leave any silicone caps on tip or base of cart when capping.
- If using pliers, cushion jaws with cloth or tape to prevent damage
- Failure to insert the mouthpiece immediately may cause leakage.
- Do not flip cartridge upside down, CCELLs must remain upright.
- If cleaning/wiping down cart: Use diluted mixture of 50% or less alcohol, and water

Caution

- If overfilled when press fitting the mouthpiece, oil will overflow and drip down into the cartridge. Wipe with alcohol immediately.
- If overfilled, cartridges exposed to high temperatures than during filling, will cause oil in cartridge to expand and leak.
- If ANY leaks are experienced, for any cartridges filled after leaking cartridge, flip the cartridge upside down after filling to purge more air.
- ANY OIL RESIDUE left in the area oartride where the tip is pressed on may cause the tip to popback up.
- Warranty is void if filling instructions are not followed.
- Please wait at least 30 minutes before using to allow the atomizer to saturate for the best vapor produc- tion.

Picture shown may vary slightly from actual product.

Charging

01. Screw in the battery end of the Power Supply into the USB charging adapter.
02. Plug USB into active port or wall adapter.
03. Halo lights up, indicating the device is charging. Halo remains lit during charging.
04. Halo flashes 20 times and turns off when fully charged.
05. Charging light stays red, even when fully charged. Once device is fully charged the light on the end of the battery will pulse 10 times and then turn off, indicating full charge. If device is plugged into an active USB port and the halo is not lit, the device is fully charged.

THIS DEVICE IS EQUIPPED WITH OVERCHARGE PROTECTION,
ALLOWING IT TO STAY PLUGGED IN UNTIL USED.

Troubleshooting

IF NO ACTIVATION OCCURS:

- Rotate mouthpiece to ensure positive connection.
- Make sure device is charged.

HIGH RESISTANCE TO DRAW:

- Do not cover air intake holes during activation.

Care & Safety

Device can be separated to clean the contact points.

- Disconnect the cartridge then clean with a cotton swab and rubbing alcohol.
- Do not attempt to repair or modify.
- Intended for adult use only.
- Do not use anything but CCELL cartridges with CCELL devices.

Specifications

- Battery capacity: 340 mAh.
- Power output: 9.5 W max
- Charging current: 500 mA (2.5 W)

Environment & Responsibility

AZTEC is committed to seeking out the best practices for the creation of our products to ensure our impact on the world is as positive as the impact our products have on our customers.
